

Tell us what your idea is.

There are a lot of note taking apps available in the wild but most of the are not good enough to take quick notes, neither are they developed keeping mobile phone in mind. This is where our app, **Memi**, comes to the rescue. Memi lets you take notes in a chat like fashion.

If you just want to take a note of the parking pillar where you parked your car you do not need to go through the tedious process of clicking the “take new note”/”create new document” button and then selecting how to organize that note a directory structure. You just open Memi, click on one of your chat and send the number of the parking pillar.

Now imagine not even needing to type the text you want to remember! Just say it or take a picture and Memi will transcribe it and save it in a searchable format using tech like Recurrent neural network - Transducer that is compact enough to reside on your phone.

Note taking has never been simpler!

Tell us how you plan on bringing it to life.

Our chat interface is already in development. Next deliverables along with their delivery date are as follows:

Deliverable	Date	Possible Google Tech Usage
Complete new note(chat) creation and addition of new item to older note UI and functionality	07-01-2020	Sentence completion for ease of typing. Just the way it is used in Gmail
Add functionality for adding note through taking picture of document	31-01-2020	ML Kit’s Text Recognition
Add functionality for adding note through drawing on screen	15-02-2020	ML Kit’s Text Recognition

Add functionality for adding note through audio	20-03-2020	Recurrent neural network - Transducer (RNN-T). The way it is implemented in GBoard
Alpha Release	01-04-2020	
Testing and design iterations	15-04-2020	
Beta Release	25-04-2020	
Released to public	01-05-2020	

Tell us about you.

We are a team of 2. Abhilash Mishra and Tanay Soley.

Abhilash Mishra is a professional Android developer in one of the leading food delivery companies in India i.e. Swiggy.

Tanay Soley is a professional Java developer working with one of the largest e-commerce organizations in India i.e. Flipkart

We have worked on the following side projects together -

Hues - Android TV app to fetch wallpapers from Reddit's image intensive subreddits and displaying them as android TV wallpapers.

RGPV papers - Android App to facilitate college going students with old year's question papers.

Mayajal - A beautiful, simple yet engaging game.

All of these apps are now discontinued from playstore because of professional commitments and discontinued development.
